PRODUCTS DATA SHEET

TANTALUM SOLID ELECTROLYTIC CAPACITOR

Type 267 E Series

RoHS COMPLIANT
LEAD FREE

MATSUO ELECTRIC CO., LTD.

Type 267 E Series

Type 267 is specially designed to SMD, based on our technology of chip tantalum capacitors acquired over many years. Fully-molded construction provides excellent mechanical protection, superior moisture resistance and high soldering heat resistance. Type 267 E Series has increased capacitance. Its volume efficiency is greatly improved compared to the same case size of M series.

FEATURES

1. Type 267 E Series has increased capacitance. Its volume efficiency is greatly improved compared to the same case size of M series.
2. Dimensional accuracy and symmetrical terminal structure suitable for high-density mounting ensures excellent "Self-Alignment".
3. Soldering: 260°C for 10 seconds by re-flow soldering.
4. Lead-free and RoHS Compliant

APPLICATION CLASSIFICATION BY USE

The application classification by use which divided the market and use into four is set up supposing our products being used for a broad use.

Please confirm the application classification by use of each product that you intend to use.

Moreover, please be sure to inform to our Sales Department in advance in examination of the use of those other than the indicated use.

RATING

Item	Rating
Category Temperature Range (Operating Temperature Range)	-55 ~ +125°C (To be used at derated voltage when temperature exceeds 85°C. At 125°C, 2/3 × rated voltage)
Rated Temperature (Max. Operating Temp. at Rated Voltage)	+85°C
Rated Voltage	2.5 ~ 50 DCV
Nominal Capacitance	0.22 ~ 680 μF
Capacitance Tolerance	± 20%(M), ± 10%(K)
Failure Rate Level	1%/1000 h

* UR = Rated Voltage US = Surge Voltage CR = Capacitance

Note1 : For Capacitance Tolerance, insert "K" or "M" into _1.

Note2 : For Reeled Package, insert "R", "L", "N" or "P" into _2.

Note3 : Insert mark for stratification into _3. Example: "7" indicates halogen-free products.

Note4 : DCL code : A=Shall not exceed the value of initial specification., B=Shall not exceed 1.25 times the value of initial specification., C=Shall not exceed 2 times the value of initial specification.

Note5 : DF code : A=Shall not exceed the value of initial specification., B=Shall not exceed 1.5 times the value of initial specification.

* UR = Rated Voltage US = Surge Voltage CR = Capacitance

Note1 : For Capacitance Tolerance, insert "K" or "M" into _1.

Note2 : For Reeled Package, insert "R", "L", "N" or "P" into _2.

Note3 : Insert mark for stratification into _3. Example: "7" indicates halogen-free products.

Note4 : DCL code : A=Shall not exceed the value of initial specification, B=Shall not exceed 1,25 times the value of initial specification, C=Shall not exceed 2 times the value of initial specification.

Note5 : DF code : A=Shall not exceed the value of initial specification, B=Shall not exceed 1.5 times the value of initial specification.

* UR = Rated Voltage US = Surge Voltage CR = Capacitance

Note1 : For Capacitance Tolerance, insert "K" or "M" into _1.

Note2 : For Reeled Package, insert "R", "L", "N" or "P" into _2.

Note3 : Insert mark for stratification into _3. Example: "7" indicates halogen-free products.

Note4 : DCL code : A=Shall not exceed the value of initial specification., B=Shall not exceed 1.25 times the value of initial specification., C=Shall not exceed 2 times the value of initial specification.

Note5 : DF code : A=Shall not exceed the value of initial specification., B=Shall not exceed 1.5 times the value of initial specification.

PERFORMANCE

No.	Item		Performance	Test method
1	Leakage Current (μA)		Shall not exceed 0.01 CV or 0.5 whichever is greater.	JIS C 5101-1, 4.9 Applied Voltage : Rated Voltage for 5 min. Temperature : 20°C
2	Capacitance (μF)		Shall be within tolerance of the nominal value specified.	JIS C 5101-1, 4.7 Frequency : 120 Hz± 20% Voltage : 0.5Vrms+1.5 ~2VDC Temperature : 20°C
3	Dissipation Factor		Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	JIS C 5101-1, 4.8 Frequency : 120 Hz± 20% Voltage : 0.5Vrms+1.5 ~2VDC Temperature : 20°C
4	ESR (Equivalent series resistance)		Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	Frequency : 10 kHz or 100kHz Temperature : 20°C
5	Characteristics at High and			JIS C 5101-1, 4.29
	Step1	Leakage Current Capacitance Dissipation Factor	Shall not exceed the value in No.1. Shall be within the specified tolerance. Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	Measuring temperature : 20 ± 2°C
	Step2	Capacitance Change Dissipation Factor	Shall be within the values shown in CATALOG NUMBERS AND RATING ①. Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	Measuring temperature : -55 ± 3 °C
	Step3	Leakage Current Capacitance Change Dissipation Factor	Shall not exceed the value in No.1. Shall be within ± 2% of the value at Step 1. Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	Measuring temperature : 20 ± 2°C
	Step4	Leakage Current Capacitance Change Dissipation Factor	Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①. Shall be within the values shown in CATALOG NUMBERS AND RATING ①. Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	Measuring temperature : 85 ± 2°C
	Step5	Leakage Current Capacitance Change Dissipation Factor	Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①. Shall be within the values shown in CATALOG NUMBERS AND RATING ①. Shall not exceed the values shown in CATALOG NUMBERS AND RATING ①.	Measuring temperature : 125 ± 2°C Measuring voltage : Derated voltage at 125°C
6	Surge	Leakage Current	Shall not exceed the values shown in CATALOG NUMBERS AND RATING ②.	JIS C 5101-1, 4.26 Test temperature and applied voltage : Half of specimens was set to 85 ± 2°C, the rest to 125 ± 2°C Applied Voltage :DC surge voltage Series protective resistance : 1000 Ω Discharge resistance : 1000 Ω
		Capacitance Change	Shall be within the values shown in CATALOG NUMBERS AND RATING ②.	
		Dissipation Factor	Shall not exceed the values shown in CATALOG NUMBERS AND RATING ②.	
		Appearance	There shall be no evidence of mechanical damage.	
7	Shear Test		No exfoliation between lead terminal and board.	JIS C 5101-1, 4.34 Capacitors mounted under conditions JIS C 5101-1, 4.33 are used as specimens. Soldering : Indirect heating · Temperature : 240 ± 10°C · Duration : 10s or less Applied pressure : 5N Duration : 10 ± 1 s
8	Substrate Bending Test	Capacitance Appearance	Initial value to remain steady during measurement. There shall be no evidence of mechanical damage.	JIS C 5101-1, 4.35 Bending : 3 mm Duration:5s
9	Vibration	Capacitance Appearance	Initial value to remain steady during measurement. There shall be no evidence of mechanical damage.	JIS C 5101-1, 4.17 Frequency range : 10 ~ 55 Hz Swing width : 1.5 mm Vibration direction :3 directions with mutually right-angled Duration : 2 hours in each of these mutually perpendicular directions (total 6 hours) Mounting :Solder terminal to the printed board
10	Shock		There shall be no intermittent contact of 0.5 ms or greater, short, or open. Nor shall there be any spark discharge, insulation breakdown, or evidence of mechanical damage.	JIS C 5101-1, 4.19 Peak acceleration : 490 m/s ² Duration : 11 ms Wave form : Half-sine
11	Solderability		Shall be covered to over 3/4 of terminal surface by new soldering.	JIS C 5101-1, 4.15 Solder temperature : 230 ± 5°C Dipping time : 3 to 5 s Dipping depth : Terminal shall be dipped into melted solder.

No.	Item	Performance	Test method
12	Resistance to Soldering Heat	Leakage Current Capacitance Change Dissipation Factor Appearance	JIS C 5101-1, 4.14 One of the following methods (a) Complete dipping method Solder temperature: 260 ± 5°C Dipping time: 10 ± 1 s (b) Terminal dipping method Solder temperature: 260 ± 5°C Dipping time: 10 ± 1 s
13	Component solvent resistance	Leakage Current Capacitance Change Dissipation Factor	JIS C 5101-1, 4.31 Temperature : 23 ± 5°C Dipping time : 5 ± 0.5 min. Conditioning : JIS C 0052 method 2 Solvent : 2-propanol (Isopropyl alcohol)
14	Solvent resistance of marking	Visual examination	JIS C 5101-1, 4.32 Temperature : 23 ± 5°C Dipping time : 5 ± 0.5 min. Conditioning : JIS C 0052 method 1 Solvent : 2-propanol (Isopropyl alcohol) Rubbing material : cotton wool
15	Rapid Change of Temperature	Leakage Current Capacitance Change Dissipation Factor Appearance	JIS C 5101-1, 4.16 Step 1 : -55 ± 3°C, 30 ± 3 min. Step 2 : 25 +10/-5°C, 3 min. max. Step 3 : 125 ± 2°C, 30 ± 3 min. Step 4 : 25 +10/-5°C, 3 min. max. Number of cycles : 5
16	Damp heat, Steady state	Leakage Current Capacitance Change Dissipation Factor Appearance	JIS C 5101-1, 4.22 Temperature : 40 ± 2°C Moisture : 90 ~ 95%RH Duration : 500 +24/0h
17	Endurance	Leakage Current Capacitance Change Dissipation Factor Appearance	JIS C 5101-1, 4.23 Test temperature and applied voltage : 85 ± 2°C and rated voltage or 125 ± 3°C and 2/3 × rated voltage Duration : 2000 +72/0h Power supply impedance : 3 Ω or less

FREQUENCY CHARACTERISTICS

TEMPERATURE CHARACTERISTICS

DAMP HEAT, STEADY STATE 40°C, 95%RH

ENDURANCE 85°C, RATED VOLTAGE

Application Notes for Tantalum Solid Electrolytic Capacitor

1. Operating Voltage

Tantalum Solid Electrolytic Capacitor shall be operated at the rated voltage or lower.

Rated voltage: The "rated voltage" refers to the maximum DC voltage that is allowed to be continuously applied between the capacitor terminals at the rated temperature.

Surge voltage: The "surge voltage" refers to the voltage that is allowed to be instantaneously applied to the capacitor at the rated temperature or the maximum working temperature. The capacitor shall withstand the voltage when a 30-second cycle of application of the voltage through a 1000 Ω series resistance is repeated 1000 times in 6-minute periods.

When designing the circuit, the equipment's required reliability must be considered and appropriate voltage derating must be performed.

2. Application that contain AC Voltage

Special attention to the following 3 items.

- (1) The sum of the DC bias voltage and the positive peak value of the AC voltage should not exceed the rated voltage.
- (2) Reverse voltage should not exceed the allowable values of the negative peak AC voltage.
- (3) Ripple current should not exceed the allowable values.

3. Reverse Voltage

Tantalum solid electrolytic capacitor is polarity. Please do not impress reverse voltage. As well, please confirm the potential of the tester beforehand when both ends of the capacitor are checked with the tester etc.

4. Permissible Ripple Current

The permissible ripple current and voltage at about 100 kHz or higher can be determined by the following formula from the permissible power loss (Pmax value) shown in Table 1 and the specified ESR value. However, when the expected operating temperature is higher than room temperature, determine the permissible values multiplying the Pmax value by the specified multiplier (Table 2). For the permissible values at different frequencies, consult our Sales Department.

$$P = I^2 \times ESR \text{ or } P = \frac{E^2 \times ESR}{Z^2}$$

$$\text{Permissible ripple current } I_{max} = \sqrt{\frac{P_{max}}{ESR}} \text{ (Arms)}$$

$$\text{Permissible ripple voltage } E_{max} = \sqrt{\frac{P_{max}}{ESR}} \times Z$$

$$= I_{max} \times Z \text{ (Vrms)}$$

I_{max} : Permissible ripple current at regulated frequency (Arms : RMS value)

E_{max} : Permissible ripple voltage at regulated frequency (Vrms : RMS value)

P_{max} : Permissible power loss (W)

ESR : Specified ESR value at regulated frequency (Ω)

Z : Impedance at regulated frequency (Ω)

Table 1 Permissible power loss

Case Code	Pmax (W)
A	0.045
B	0.050
C ₃	0.065
D ₃	0.085
H	0.100
E	0.105

Table 2 Pmax multiplier at each operating temperature

Operating temperature (°C)	Multiplier
25	1.0
55	0.9
85	0.8
125	0.4

Note: Above values are measured at 0.8t glass epoxy board mounting in free air and may be changed depending on the kind of board, packing density, and air convection condition. Please consult us if calculated power loss value is different from above list of P max value.

5. Application on low-impedance circuit

The failure rate of low impedance circuit at 0.1Ω/V is about five times greater than that of a 1Ω/V circuit. To curtail this higher failure rate, tantalum capacitors used in low impedance circuits, such as filters for power supplies, particularly switching power supplies, or for noise bypassing, require that operating voltage be derated to less than half of the rated voltage. Actually, less than 1/3 of the rated voltage is recommended.

6. Non Polar Application(BACK TO BACK)

The capacitor cannot be used as a non-polar unit.

7. Soldering

7.1. Preheating

To obtain optimal reliability and solderability conditions, capacitors should be pre-heated at 130 to 200 °C for approximately 60 to 120 seconds.

7.2. Soldering

The body of the capacitor shall not exceed 260 °C during soldering.

(1) Reflow Soldering

Reflow soldering is a process in which the capacitors are mounted on a printed board with solder paste. There are two methods of Reflow Soldering: Direct and Atmospheric Heat.

· Direct Heat (Hot plate)

During the Direct Heat method, the capacitor has been positioned on a printed board, which is then placed upon a hot plate.

The capacitor maintains a lower temperature than the substrate, which in turn stays at a lower temperature than the hot plate.

· Atmospheric Heat

a) VPS (Vapor Phase Soldering)

During VPS, the substrate is heated by an inert liquid with a high boiling point. The temperature of the capacitor's body and the temperature of the substrate are about the same as the atmosphere. This temperature should be below 240°C.

b) Near and Far IR Ray

Due to the heat absorption of the capacitor's body, the internal temperature of the capacitors may be 20 ~ 30°C higher than the setting temperature and may exceed 260°C.

Temperature control is crucial in maintaining a temperature of 260 °C or lower.

c) Convection Oven

An infrared ray is the main source of heat in this process. The temperature of the substrate and the capacitors can be maintained at a similar level by the circulation of heated air, or an inert gas.

Temperature	Time
T1=130°C~200°C	A1=60~120sec.
T2=220°C~230°C	A2<60秒以下
T3=~260°C	10sec. or less than 10

Number of times: 2 times max.

(2) Soldering with a Soldering Iron

Soldering with a soldering iron cannot be recommended due to the lack of consistency in maintaining temperatures and process times. If this method should be necessary, the iron should never touch the capacitor's terminals, and the temperature of the soldering iron should never exceed 350°C. The application of the iron should not exceed 5 seconds.

(3) Please consult us for other methods.

8. Cleaning

Cleaning by organic solvent may damage capacitor's appearance and performance. However, our capacitors are not effected even when soaked at 20 ~ 30°C 2-propanol for 5 minutes. When introducing new cleaning methods or changing the cleaning term, please consult us.

9. Protective Resin Coating

After components are assembled to substrate, a protective resin coating is sometimes applied. As this resin coating cures, it gives mechanical and thermal stress to Tantalum capacitors. This stress can cause damage to the capacitors, which affects their reliability. Before using a resin coating, proper research must be done in regards to the material and process to insure that excessive stress will not be applied to capacitors and other components.

10. Vibration

Approximately 300 G shall be applied to a capacitor, when dropped from 1 meter to a concrete floor.

Although capacitors are made to withstand this drop test, stress from shock due to falling or striking does cause damage to the capacitors and increases failure rates. Do not subject capacitors to this type of mechanical stress.

11. Ultrasonic cleaning

Matsuo does not recommend Ultrasonic cleaning. This may cause damage to the capacitors, and may even cause broken terminals. If the Ultrasonic cleaning process will be used, please note the following:

- (1) The solvent should not be boiled. (Lower the ultrasonic wave output or use solvent with The high boiling point.)
- (2) The recommended wattage is less than 0.5 watts per cm².
- (3) The cleaning time should be kept to a minimum. Also, samples must be swang in the solvent. Please consult us.

12. Additional Notes

- When more than one capacitor is connected in series, a resistor that can distribute the voltage equally to the capacitors shall be connected in parallel.
- The capacitor cases shall not be cut even if the mounting space is insufficient.
- During a customer's aging process, voltage should remain under the rated voltage at all times.
- Capacitors should never be touched or manipulated while operating.
- Capacitors are not meant to be dismantled.
- When testing capacitors, please examine the power source before conducting test to insure the tester's polarity and applied voltage.
- In the event of a capacitor burning, smoking, or emitting an offensive smell during operation, please turn the circuit "off" and keep hands and face away from the burning capacitor.
- If a capacitor be electrical shorted, it becomes hot, and the capacitor element may ignite. In this case, the printed board may be burnt out.
- Capacitors should be stored at room temperature under low humidity. Capacitors should never be stored under direct sunlight, and should be stored in an environment containing dust.
- If the capacitors will be operated in a humid environment, they should be sealed with a compound under proper conditions.
- Capacitors should not be stored or operated in environments containing acids, alkalis or active gasses.
- When capacitors are disposed of as "scrap" or waste, they should be treated as Industria Waste since they contain various metals and polymers.
- Capacitors submitted as samples should not be used for production purposes.
- The plastic reel (made of PS) used for packaging the product is intended for use in ambient temperatures (5-35°C). To prevent issues during automated insertion due to reel deformation or other factors, please keep the reel away from direct sunlight and heat sources, and ensure it does not reach high temperatures (above 60°C), including during transportation.

These application notes are prepared based on "Guideline of notabilia for fixed tantalum electrolytic capacitors with solid electrolyte for use in electronic equipment" (RCR-2368) issued by Japan Electronics and Information Technology Industries Association (JEITA).

For the details of the instructions (explanation, reasons and concrete examples), please refer to this guideline, or consult our Sales Department.

MATSUO ELECTRIC CO., LTD.

		Outline	Typical example of application	Chip Tantalum Capacitors	Leaded Tantalum Capacitors	Circuit Protection Components	Film Capacitors
High reliability apparatus	1	<ul style="list-style-type: none"> - Apparatus in which advanced safety and reliability are demanded. - Whether failure of the apparatus which cannot maintenance exchange products, and a product is direct for a human life, apparatus which changes or may cause a fatal system failure. 	<ul style="list-style-type: none"> - Space development apparatus relation (Satellite, Rocket, Artificial Satellite) - Aviation and a defensive system - Atomic power, fire power, and a water-power generation system 	Type 267 P Series	Type 111 P series	With no relevance	With no relevance
In-vehicle Industrial apparatus	2	<ul style="list-style-type: none"> - Apparatus in which reliability is important. - The apparatus in which maintenance exchange of a product is very difficult, and failure of a product influence a human life, or the range of failure is wide range. 	<ul style="list-style-type: none"> - Vehicles control of transport machines, such as a car, and a railroad, a vessel (Engine control, drive control, brake control) - The operation control system of the Shinkansen and a main artery 	Type 267 N Series Type 271 N Series Type 279 M Series	Type 111 N series Type 111 M series Type 112 M series Type 204 N series Type 247	Type JAG N series Type JAJ N series Type JAK N series Type JHC N series Type KAB N series Type KVA N series	Type 431 Type 431 A series Type 503 Type 553 Type 801 Type 802
	3	<ul style="list-style-type: none"> - Apparatus which can maintenance exchange products, and apparatus in which the loss of the system failure is large although failure of a product does not influence a human life, and maintenance engineering is demanded 	<ul style="list-style-type: none"> - Vehicle indoor loading parts, such as an air-conditioner and car navigation, and in-vehicle communication facility - Security management system for home/buildings etc. - Control apparatus, such as Industrial use robots and a machine tool etc. 	Type 267 M Series Type 267 E Series Type 281 M Series Type TCA	Type 204 M series	Type KAB M series	
Apparatus in general	4	<ul style="list-style-type: none"> - The small size and the thin article which applies leading-edge technology positively - The product supposing being used widely in the market for the apparatus which can maintenance exchange products, and apparatus with a partial system failure by failure of product. 	<ul style="list-style-type: none"> - Smart phone, Mobile phone, Mobile PC (tablet), Electronic dictionary - Desktop PC, Notebook PC, Home network - Amusement apparatus (Pachinko, Game machine) 	Type 251 M Series Type 281 E Series Type TCB		Type JAE, Type JAG Type JAJ, Type JAK Type JHC Type KAB Type KAB T series Type KVA	Type 503 A series
