PRODUCTS DATA SHEET

HIGH CURRENT MICRO FUSE

TYPE JHC

7358-1173 SIZE

UL. cUL approved
File No. E170721
E480488

RoHS compliant
〈Complete lead-free〉

MATSUO ELECTRIC Co., LTD.

Type JHC

TYPE JHC High Current Micro Fuse is designed for the purpose of external short circuit protection of the lithium ion battery of medium sizes, such as a power tool and an electric assistant bicycle.
Though it was a surface mount type, it was small and realized high current rating, because a fuse element and a terminal adopt the structure of one.
Furthermore perfectly compliant to Lead-free makes environment friendly design.

FEATURES

1. High current rating was realized because a fuse element and a terminal adopt the structure of one.
2. Surface mount type and small size of 7358 (7.3mm × 5.8mm × 4.2mm) and 1173 (11.0mm × 7.3mm × 5.9mm).
3. Surface temperature rise is 75°C or less when applying rated current. This gives little influence to the peripheral units.
4. Alumina ceramics are adopted as a case, original structure is adopted as the inside of a case, and the safety at the time of fusing is improved.
5. Suitable for automatic mounting
6. Complete lead-free

APPLICATION CLASSIFICATION BY USE

The application classification by use which divided the market and use into four is set up supposing our products being used for a broad use.
Please confirm the application classification by use of each product that you intend to use.
Moreover, please be sure to inform to our Sales Department in advance in examination of the use of those other than the indicated use.

RATING

Item	Rating
Category Temperature Range	-40 ～+125℃
Rated Current	30A、40A、50A、60A、80A、100A
Rated Voltage	35VDC, 60VDC, 84VDC, 110VDC
Voltage Drop	Refer to CATALOG NUMBERS AND RATING
Insulation Resistance (between terminals and case)	1000MΩ or more
Fusing Characteristics	Fusing within 1 minute if the current is 250% of rated current.
Clearing Characteristics	Breaking voltage：Rated Voltage
	Breaking Current： Refer to CATALOG NUMBERS AND RATING

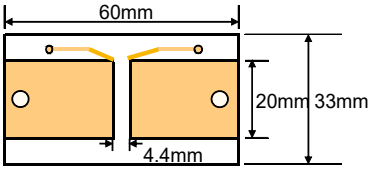
Board thickness : 1.6mm
Thickness of Copper layer : 400μm
Rated Current : 30~50A



Glass epoxy body on one side
Board thickness : 1.6mm
Thickness of Copper layer : 500μm
Rated Current : 60~100A

PERFORMANCE

No	Item	Performance	Test method
1	Temperature rise	Temperature rise shall not exceed 75℃	Apply rated current
2	Current-carrying capacity	Shall not open within 1 hour.	Apply 100% of rated current
3	Clearing characteristics	Arc shall not be continued. No ignition. Marking shall be legible No bursting of the fuse	Breaking voltage : Rated voltage Breaking current : Refer to CATALOG NUMBERS AND RATING
4	Voltage drop	Voltage drop is below the value specified in CATALOG NUMBERS AND RATING.	Apply rated current
5	Fusing characteristics	Fusing within I min.	Apply 250% of rated current (Ambient temperature: 10～30℃)
6	Insulation resistance	1000MΩ or more	Insulation resistance between terminals and case(ceramics)
7	Electrode strength (Bending)	No mechanical damage. Resistance change after the test shall be within ± 20%.	Board supporting width : 90mm Bending speed : Approx. 0.5mm/s Duration : 5 s Bending : 3mm
8	Shear test	No mechanical damage. Resistance change after the test shall be within ± 20%.	Applied force : 20N Duration : 10s Tool : R0.5 Direction of the press : side face
9	Core body strength	No mechanical damage. Resistance change after the test shall be within ± 20%.	Supporting dimension : 3.65mm Applied force : 20N Duration : 10s Tool : R0.5 Direction of the press : thickness direction of product
10	Solderability (Solder Wetting time)	Solder Wetting time : within 3s	Solder : Sn-3Ag-0.5Cu Temperature : 245±5℃ meniscograph method
11	Solderability (new uniform coating of solder)	The dipping surface of the terminals shall be covered more than 95% with new solder.	Solder : Sn-3Ag-0.5Cu Temperature : 245±5℃ Dippinng : 3s
12	Resistance to soldering heat	Marking shall be legible. No mechanical damage. Resistance change after the test shall be within ± 20%.	Dipping (1 cycle) Preconditioning : 100～150℃／60s Temperature : 265±3℃／6～7s Reflow (2 cycle) Preconditioning : Lower than 180℃ 1～2min Peak : 250±5℃ 5s Holding : 230～250℃ 30～40s Cooling : More than 2min Manual soldering(2 cycle) Temperature : 350±10℃ Duration : 3～4s Measure after 1hour left under room temperature and humidity.
13	Solvent resistance	Marking shall be legible. No mechanical damage. No significant irregularity in the appearance.	Dipping rinse Solvent : Isopropyl alcohol Duration : 90s
14	Vibration	No mechanical damage. Resistance change after the test shall be within ± 20%.	Frequency rage : 10～55～10Hz/min Vibration amplitude : 1.5mm Duration : 2 hours in each of XYZ directions (total : 6 hours)
15	Shock	No mechanical damage. Resistance change after the test shall be within ± 20%.	Peak value : 490m/s² Duration : 11ms 6 aspects × 3 times (total: 18 times)
16	Thermal shock	No mechanical damage. Resistance change after the test shall be within ± 20%.	-55±3℃ : 30min Room temperature : 2～3min or less 125±2℃ : 30min Room temperature : 2～3min or less Repeat above step for 10 cycles
17	Moisture resistance	No mechanical damage. Resistance change after the test shall be within ± 20%.	Temperature : 85±3℃ Humidity : 85±5%RH Duration : 1000h
18	Load life	No mechanical damage. Resistance change after the test shall be within ± 20%.	Temperature : 85±2℃ Applied current : Rated current×70% Duration : 1000h
19	Moisture resistance load	No mechanical damage. Resistance change after the test shall be within ± 20%.	Temperature : 85±3℃ Humidity : 85±5%RH Applied current : Rated current×70% Duration : 1000h
20	Stability	No mechanical damage. Resistance change after the test shall be within ± 20%.	Temperature : 125±2℃ Duration : 1000h

DETERMINATION OF RATED VALUE AND SELECTION OF MICRO FUSE (TYPE JHC)

Determine the rated value of the micro fuse, and select the micro fuse for your circuit. If you select the micro fuse , safety of your circuit can be ensured.
How to determine the rated value of the micro fuse is described below:

■Flow for fuse selection

1. Measurement of circuit values using actual device
   Measure the circuit values, such as operating current of the circuit.
2. Calculation from operating current
   From the obtained operating current and the category temperature, calculate minimum rated value to determine the applicable fuse.
3. Calculation from overload current
   From the obtained overload current, calculate the maximum rated value to determine the applicable fuse.
4. Calculation from inrush current
   From the inrush current, calculate the minimum rated value to determine the applicable fuse.
5. Final determination of rated value
   From the calculation results of steps 2 through 4, determine the rated value.
6. Operation check using actual device
   After selecting the rating, confirm if the device works properly under the pre-determined conditions.

■Fuse selection

1. Measurement of circuit values using actual device
   Before determining the rated value of the fuse, preliminarily measure the following condition by using the actual device.

1-1. Operating current
   Using an oscilloscope or equivalents, measure operating current of the circuit.
1-2. Overload current
   Using an oscilloscope or equivalents, measure the overload current that needs to break the circuit.
1-3. Inrush current
   Using an oscilloscope or equivalents, measure the inrush current of circuit at power-on or power-off. In addition, determine the number of inrush current applied.
1-4. Category temperature
   Measure the ambient temperature of the fuse circuit.

<The notes to the design of substrate wiring>
   In a 25℃ environment under normal circumstances, please design substrate wiring so that the surface temperature of a fuse does not exceed 80℃.

EXAMPLE TO SELECT RATINGS OF TYPE JHC
<Fuse selection>
   Effective operating current : 30 A
   Effective overload current : 140 A
   Inrush current waveform : Fig. A
   (Pulse width : 2 ms, Wave height : 300 A)
   Numbers to withstand inrush current : 100,000 times
   Category temperature : 85°C
   Operating time : 4,000h

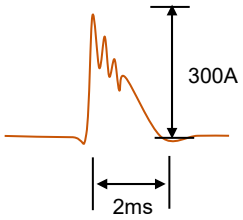

Fig. A : Inrush current waveform

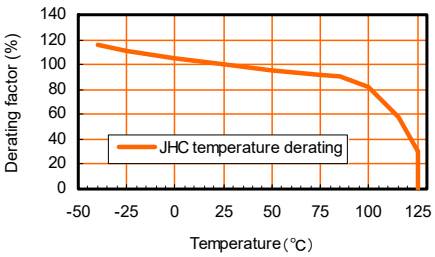
2. Calculation from operating current
2–1. Measurement of operating current
   Using an oscilloscope or equivalents, measure operating current (effective current) of the actual circuit.
   Example : Effective operating current = 30 A

Fig. B



2–2 Derating
   ①Temperature derating factor
      Using Fig. B, find the temperature derating factor correspond to the Temperature. However, in order to be allowed to check an operating condition in use to the apparatus used for a long time that the operating time exceeds 4,000 h, please ask our Sales Department.
   ②Rated derating factor
      Rated derating factor = 0.94 (Constant irrespective of temperature)

      Use Formula 1 to calculate the rated current of the fuse to be used for the circuit.
      Rated current of fuse ≥ Operating current/(①×②) ... Formula 1

Example : Category temperature = 85°C, Operating current =30 A

①Temperature derating factor = 0.90 (Refer to Fig. B.)

②Rated derating factor = 0.94 (Constant irrespective of temperature)

Calculation using Formula 1 :

Rated current ≥ 30/(0.90×0.94) = 35.5A

The above calculation result shows that the fuse with rated current of 35.5A or more should be selected for this circuit.

Type JHC, with rated current of 50 A and 40A can be selected.

3. Calculation from overload current

3–1 Measurement of overload current

Using oscilloscope or equivalents, measure overload current that needs to break circuit.

Example : Effective overload current = 140 A

3–2 Calculation from overload current

Determine rated current so that overload current can be 2.5 times larger than rated current.

Use Formula 2 to calculate rated current of fuse.

Rated current of fuse ≤ Overload current/2.5 ... Formula 2

Example : Overload current = 140 A

Use Formula 2 to calculate the rated current.

Rated current ≤ 140/2.5 = 56 A

The above calculation result shows that the fuse with rated current of 56 A or less should be selected for this circuit.

Type JHC, with rated current of 50 A and 40A can be selected.

4. Calculation from inrush current

4–1 Measurement of inrush current waveform

Using an oscilloscope or equivalent, measure waveform of inrush current of actual circuit.

4–2 Creation of approximate waveform

Generally, waveform of inrush current is complicated. For this reason, create the approximate waveform of inrush current as shown on Fig. C to simplify calculation.

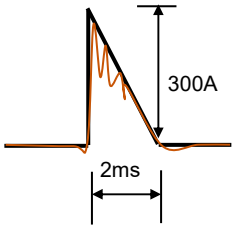


Fig. C：Inrush current waveform
Red line : Actual measurement waveform
Black line：Approximate waveform

4–3 Calculation of I^2t of inrush current

Calculate I^2t (Joule integral) of approximate waveform.

The formula for this calculation depends on the approximate waveform.

Refer to Table A.

Example : Pulse applied = 2 ms, Peak value = 300 A

Approximate waveform = Triangular wave

Since the approximate waveform is a triangular wave, use the following formula for calculation.

I^2t of rush current = 1/3 × Im^2 × t ... Formula 3 (Im : Peak value, t : Pulse applying time)

Use Formula 3 to calculate I2t of the inrush current:

I^2t = 1/3 × 300 × 300 × 0.002 = 60 (A^2s)

JOULE-INTEGRAL VALUES FOR EACH WAVEFORM

Table A

Name	Waveform	I^2t	Name	Waveform	I^2t
Sine wave (1cycle)		$\frac{1}{2} I_m^2 t$	Trapezoidal wave		$\frac{1}{3} I_m^2 t_1 + I_m^2 (t_2-t_1) + \frac{1}{3} I_m^2 (t_3-t_2)$
Sine wave (half cycle)		$\frac{1}{2} I_m^2 t$	Various wave 1		$I_1 I_2 t + \frac{1}{3} (I_1-I_2)^2 t$
Triangular wave		$\frac{1}{3} I_m^2 t$	Various wave 2		$\frac{1}{3} I_1^2 t_1 + \{I_1 I_2 + \frac{1}{3} (I_1-I_2)^2\} (t_2-t_1) + \frac{1}{3} I_2^2 (t_3-t_2)$
Rectangular wave		$I_m^2 t$	Charge/ discharge waveform		$\frac{1}{2} I_m^2 \tau$

* Following formula is generally used for calculation of I^2t as i(t) equal to current.

$$I^2 t = \int_0^t i^2 (t)\, dt$$

4-4 Search of load ratio

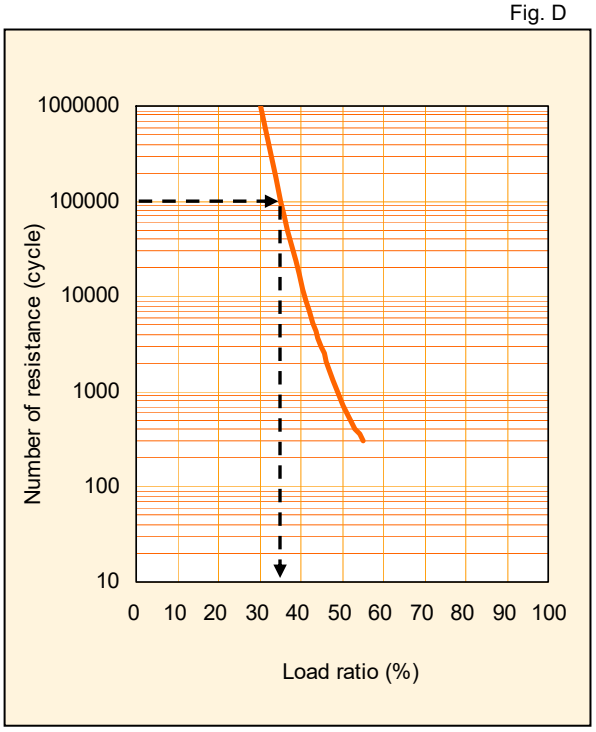
①Set up number of cycles to withstand.
(generally 100,000 times)

②Obtain load ratio from Pulse resistance characteristics.
(Fig. D)

Example : 100,000 times is required against inrush current applied.
The load ratio is 35% or less from Fig. D.

PULSE RESISTANCE CHARACTERISTICS

Fig. D



4–5 Calculation from Joule integral and load ratio

Use Formula 4 to calculate the standard I^2t for the fuse to be used.

Standard I^2t of fuse > (I^2t of inrush current/load ratio) .....
.....Formula 4

Example : I^2t of pulse = 60 A2s,
Pulse applied = 2 ms, Required load ratio = 35%

From Formula 4,

Standard I^2t of fuse > 60/0.35 = 171.4 (A2s)

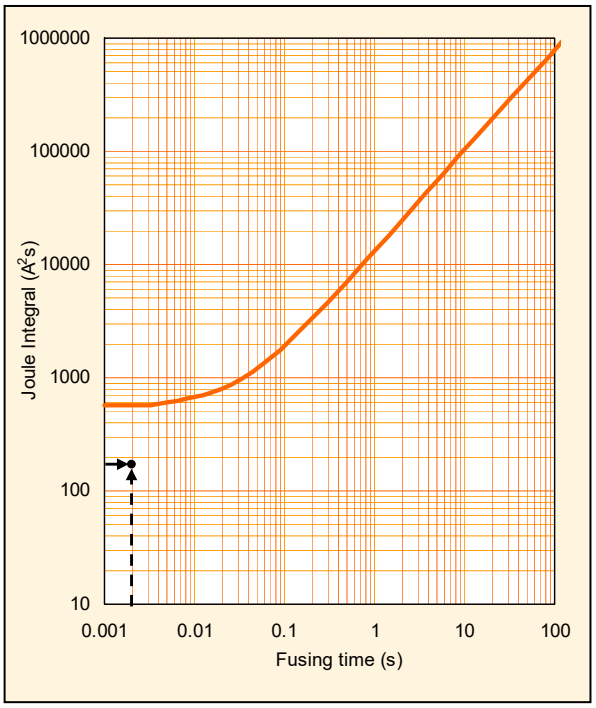
The standard I^2t of the fuse should be 171.4 (A2s) or more.

Since the rush pulse applied is 2 ms, obtain the intersection of 2 ms (horizontal axis) and 171.4 A2s (vertical axis) from Fig. E (refer to the arrow shown in Fig. E).

Select a fuse whose curve is above the intersection. Type JHC with rated current of 50 A and 40A should be selected.

JOULE INTEGRAL VS. FUSING TIME

Fig. E



5. Final determination of rated value

Determine the rated current of micro fuse. Rated current should meet all the calculation results.

Example : Rated current of 50 A and 40A meets the all requirement.

6. Operation check using actual device

After selecting rating, confirm if the device works properly under pre-determined conditions.

Application Notes for Micro Fuse

1. Circuit Design

Before using HIGH CURRENT MICRO FUSE, be sure to fully check after confirming operating conditions and Micro Fuse characteristics.
When determining the rated current, be sure to observe the following items :

(1) HIGH CURRENT MICRO FUSE should always be operated below the value considered in the rated derating rate and temperaturederating rate for rated current.
(2) HIGH CURRENT MICRO FUSE should always be operated below rate for rated current.
(3) HIGH CURRENT MICRO FUSE should be selected with rated value to be certainly fused at overload current.
(4) When HIGH CURRENT MICRO FUSE are used in inrush current applications, please confirm sufficiently inrush resistance of HIGH CURRENT MICRO FUSE.
(5) Please do not apply the current exceeding the rated breaking current to HIGH CURRENT MICRO FUSE.
In addition, I would like confirmation beforehand not to have possibilities to cut if off normally when you uses it by a high inductance circuit.
(6) Use HIGH CURRENT MICRO FUSE under the condition of category temperature.
(7) HIGH CURRENT MICRO FUSE should not be used in the AC power source and primary power source.
(8) In a 25°C environment under normal circumstances, please design substrate wiring so that the surface temperature of a fuse does not exceed 80°C.
And, please use after checking that turn on operating current and overload current by an actual substrate in advance, and it is satisfactory.

Please confirm whether the selection of the rating of HIGH CURRENT MICRO FUSE was appropriate in the actual device (state of final product).
In that case, after considering the variation due to the product, repeat the tests for normal use and predictable abnormalities to confirm the validity of the selection.

2. Assembly and Mounting

During the entire assembly process, observe HIGH CURRENT MICRO FUSE body temperature and the heating time specified in the performance table. In addition, observe the following items :

(1) Mounting and adjusting with soldering irons are not recommendable since temperature and time control is difficult.
(2) Once HIGH CURRENT MICRO FUSE mounted on the board, they should never be remounted on boards or substrates.
(3) During mounting, be careful not to apply any excessive mechanical stresses to the HIGH CURRENT MICRO FUSE.

3. Solvents

HIGH CURRENT MICRO FUSE has no effect when immersed in is isopropyl alcohol for 90 seconds (at 20 ~ 30°C liquid temp.)
If organic solvents will be used to HIGH CURRENT MICRO FUSE, be sure to preliminarily check that the solvent will not damage HIGH CURRENT MICRO FUSE .

4. Ultrasonic Cleaning

Ultrasonic cleaning is not recommended for HIGH CURRENT MICRO FUSE. This may cause damage to HIGH CURRENT MICRO FUSE such as broken terminals which results in electrical characteristics effects, etc. depending on the conditions.

5. Caution During Usage

(1) HIGH CURRENT MICRO FUSE with electricity should never be touched.
HIGH CURRENT MICRO FUSE with electricity may cause burning due to HIGH CURRENT MICRO FUSE high temperature.
Also, in case of touching HIGH CURRENT MICRO FUSE without electricity, please check the safety temperature of HIGH CURRENT MICRO FUSE.
(2) Protective eye glasses should always be worn when performing fusing tests.
However, there is a fear that HIGH CURRENT MICRO FUSE will explode during test.
During fusing tests, please cover particles not to fly outward from the board or testing fixture. Caution is necessary during usage at all times.

6. Environmental Conditions

(1) HIGH CURRENT MICRO FUSE should not be stored or operated in the presence of acids, or alkalis, or corrosive atmosphere.
(2) HIGH CURRENT MICRO FUSE should not be vibrated, shocked, or pressed excessively.
(3) HIGH CURRENT MICRO FUSE should not be operated in a flammable or explosive atmosphere.
(4) HIGH CURRENT MICRO FUSE should not be used under dew condensation environment.
(5) Covering HIGH CURRENT MICRO FUSE with resin after mounting it on the board may affect the electrical characteristics, so perform thorough evaluation in advance.

7. Emergency

In case of fire, smoking, or offensive odor during operation, please cut off the power in the circuit or pull the plug out.

8. Storage

(1) HIGH CURRENT MICRO FUSE should not be stored in an environment with high temperature, low temperature, high humidity, condensation and dust and avoid direct sunlight.
HIGH CURRENT MICRO FUSE should not be stored in corrosive atmosphere such as H_2S(hydrogen sulfide) or SO_2(sulfur dioxide).
Direct sunlight may cause decolorization and deformation of the exterior and taping.
Also, there is a fear that solderability will be remarkably lower in high humidity.
(2) If the products are stored for an extended period of time, please contact Matsuo Sales Department for recommendation. The longer storage term causes packages and tapings to worsen. If the products are stored for longer term, please contact Matsuo Sales Department for advice.
(3) The products in taping, package, or box should not be given any kind of physical pressure. Deformation of taping or package may affect automatic mounting.
(4) The plastic reel (made of PS) used for packaging the product is intended for use in ambient temperatures (5-35℃). To prevent issues during automated insertion due to reel deformation or other factors, please keep the reel away from direct sunlight and heat sources, and ensure it does not reach high temperatures (above 60℃), including during transportation.

9. Disposal

When HIGH CURRENT MICRO FUSE are disposed of as waste or “scrap”, they should be treated as “industrial waste”.

10. Samples

HIGH CURRENT MICRO FUSE received as samples should not be used in production applications. A sample is provided for the special use (in such cases as the one for the form sample, the electriccharacteristic confirmation)

MATSUO ELECTRIC CO., LTD.

Please feel free to ask our Sales Department for more information on Micro Fuse.
